Abstract (en)
[origin: WO2018116057A1] The aim of the invention is to provide an appliance of the type in question having improved properties with respect to temperature determination. This aim is achieved, according to the invention, by a cooking appliance, in particular an induction cooking appliance, having at least one heating element (12), which is provided for heating at least one object (14) in at least one heating operation state, and having a control unit (16), which control unit is provided for determining a temperature (T) of the object (14) heated by the heating element (12) from an impedance (Z0) of a system (18) comprising the heating element (12) and the object (14) in the heating operation state.
