Abstract (en)

[origin: WO2018116062A1] The invention relates to a cooking device comprising at least one heating coil (10a - 10d), which has at least two windings (12a - 12d, 13a - 13d), and at least one fixing device (14a - 14d), which at least partly mechanically fixes the heating coil (10a - 10d) in an assembled state. The aim of the invention is to increase stability at high operating temperatures and reduce production costs. This is achieved in that the fixing device (14a - 14d) comprises a support unit (16a - 16d) and a retaining unit (18a - 18d) which fixes each of the windings (12a - 12d, 13a - 13d) to the support unit (16a - 16d) separately in the assembled state.
