Abstract (en)
[origin: EP3560616A1] An object is to provide, in controlled cooling in which a hot-rolled steel plate is cooled while being constrained by rolls, a steel-plate cooling method with a less distortion, a steel-plate cooling apparatus, and a steel-plate manufacturing method. A steel-plate cooling method includes conveying a steel plate in a state of being constrained by a plurality of rolls disposed at a predetermined pitch in a steel-plate conveying direction and cooling the steel plate by jetting a cooling water onto upper and lower surfaces of the steel plate by using cooling nozzles disposed between the plurality of rolls. The cooling is performed at a plate passage speed V that satisfies a formula (1) below. $V > 2.21 \times 10^{-5} \times C_v \times L^3 \times t^{-2} \times 24.2 + 204.3 \times L / W^2 - 1$ where, in the formula (1), V : plate passage speed (m/s), C_v : cooling speed ($^{\circ}$ C/s) with respect to a steel-plate average temperature in a plate thickness direction, L : roll pitch (m), t : plate thickness (m), and W : plate width (m).
