Abstract (en)

A container (10) serves for receiving, in particular for storing and/or transporting, goods (32) to be kept at a certain temperature or in a certain temperature range or to be cooled. It comprises an upwardly open receiving portion (12) for receiving the goods (32) to be kept at a certain temperature or in a certain temperature range or to be cooled. According to the invention it is proposed that it further comprises a flexible and essentially two-dimensional separating means (20) having a peripheral edge (22) and being attached to the receiving portion (12) by means of only a partial edge portion (24a) of its peripheral edge (22).
