Abstract (en)
[origin: WO2018121992A1] A connecting system comprising a hollow transfer tube having at least two openings and one or more walls defining an aperture sealed at one end with a polymeric seal, the aperture being large enough to accommodate the transfer tube. The invention is also directed to a refill cartridge and to a dispenser. The dispenser includes a housing having an opening suitable for accommodating the refill cartridge. The housing includes at least one of i) one or more walls defining an aperture sealed at one end with a polymeric seal, the aperture being large enough to accommodate a transfer tube, the opening being in fluid communication with a conduit within the housing or ii) a hollow transfer tube, having at least two openings, extending from the housing, one opening being in communication with a conduit in the housing and the second opening in fluid communication with the exterior of the dispenser housing. The dispenser may include a u-shaped vent tube and a double valve liquid pump.
