Abstract (en)

[origin: WO2018125016A1] The present invention relates to a sliding door step mechanism (1) which is developed for preventing accumulation of mud and snow on the side sliding door step (2) in transit vehicles and also small dents that might occur as a result of the doors of the adjacent parked vehicles hitting the sliding door when being opened. The object of the present invention is to provide a sliding door step mechanism (1) which can clean itself from the dirt deposits such as mud and snow accumulating on the step (2) that passengers use to get in the vehicles having sliding doors.
