Abstract (en)

[origin: WO2018122530A1] The invention relates to a wrapping comprising a ridge (1) forming a tube, the joining of which to the upper transverse edge (3) forms a leaktight border (4) disposed between two sides (5a, 5b) of said wrapping, said ridge extending from a first lateral portion (4b) of said border to close to one side (5a), said border having a central portion (4a) in which a cutout (6) in communication with the packaging space (2) is formed, a precut (9a) for starting tearing being formed in the ridge (1) and in the lateral portion (4b), extending transversely next to said cutout, the central portion (4a) being provided with a removal line (13) positioned in transverse continuation of the precut (9a) and designed to allow continuation of the tearing of the precut (9a) into the central portion (4a) in order to create, through the cutout (6), an opening for dispensing the packaged product.
