Abstract (en)

[origin: KR20180090178A] The present disclosure relates to a communication technique which fuses a 5G communication system with an IoT technology to support a higher data rate than that of a 4G system, and a system thereof. The present disclosure can be applied to an intelligent service (e.g. smart home, smart building, smart city, smart car or connected car, health care, digital education, retail business, security- and safety-related services, etc.) based on a 5G communication technology and an IoT related technology. Furthermore, according to the present invention, a technique related to a cell reselection operation in a mobile communication system is disclosed.
