Abstract (en)
[origin: EP3564067A1] To provide a child seat capable of facilitating operation of an abutting member that moves from a platform on a seat to a back side of a seat, a child seat (10) includes: a sitting seat (12) for an infant; a platform (14) that supports the sitting seat (12) and is mounted to the seat; an abutting member (20) installed in the platform (14) and disposed between the sitting seat (12) and the seat; and a position adjusting means (30) that moves the abutting member (20) from the platform (14) to the seat side. The position adjusting means (30) has a control unit (32) provided on the abutting member (20) side.
