Abstract (en)

The present invention relates to a handle for doors and windows and can be included in the technical sector of the manufacture of windows or doors and hardware thereof. More specifically, the object of the invention is a handle which comprises a series of relative improvements which allow the front coupling of a movable piece together with a lever assembly, which allows the use of said handle in a wide array of profiles and opening typologies, without penalising the operation or minimalist aesthetics of the handle.
