Abstract (en)
A lock for sliding fixtures, characterised in that it comprises an operative assembly equipped with a hook on which two mobile appendices are arranged; said hook defining at least two operating positions; an extended position, in which said hook will possibly engage a locking seat formed in a lock striker, and a retracted position, in which said hook is substantially inside the operative assembly and does not engage the locking seat; in said retracted position, said appendices being substantially fitted inside the body of the hook; in said extended position said appendices being arranged at a right angle relative to the driving axis of the hook so as to engage two undercuts formed in said seat of said lock striker; said lock comprising a mechanism arranged within the body of said operative assembly which is formed by two half-shells; said mechanism controlling the movement of said hook and said appendices; said operative assembly being fitted into a seat formed in a shutter and being fixed through an outer casing, formed by a pair of plates mounted on said operative assembly.
