Abstract (en)

Methods and apparatus are provided for rendering a display page for a legacy display unit of an aircraft utilizing data from an advanced Flight Management System (FMS). The method comprises accessing aircraft flight data from a display page generated by the advanced FMS. A mapping table is created by comparing the advanced display page with a display page generated by the legacy display unit. The aircraft data is arranged for a legacy display page layout according to the mapping table. The legacy display page layout is then transmitted to the legacy display unit.
