Abstract (en)

[origin: WO2018129260A1] An adornment assembly for an article having a base assembly made up of at least one layer, each with a thickness between oppositely facing surfaces. One of the oppositely facing surfaces faces an article surface to which the adornment assembly is secured. The at least one layer defines at least a first receptacle. The adornment assembly further has a plurality of discrete components each with a thickness between oppositely facing surfaces. At least first and second of the discrete components are placed in the at least first receptacle so that one of the oppositely facing surfaces on each of the first and second discrete components is exposed for viewing with the adornment assembly secured to an article.
