Abstract (en)  
[origin: WO2018127779A1] Connecting device (40) allowing a releasable connection between a bracelet strap (20) and a folding clasp (30) comprising at least two articulated arms (32) and two fastening portions (31) capable of reversibly cooperating with each other, comprising a first connecting piece (41) capable of being secured to the free end of the bracelet strap (20) and a second connecting piece (42) capable of being mounted on the fastening portion (31), characterised in that said first connecting piece (41) and said second connecting piece (42) are configured to reversibly cooperate with each other between a first open position, allowing the separation between the first connecting piece (41) and the second connecting piece (42), and a second closed position in which said first connecting piece (41) and said second connecting piece (42) are locked together.
