Abstract (en)
[origin: WO2018161982A1] The invention relates to a slicing machine for foodstuffs (12) in block form, having a housing with a loading region for the foodstuff (12) in block form and with a removal region for the sliced foodstuff (24) in block form. A shaft (10) is provided to receive the foodstuff (12) in block form, the longitudinal direction of said shaft corresponding to the advance direction of the foodstuff (12) in block form. A packing device for the sliced foodstuff (12) in block form is located inside the housing, said packing device having at least one bag opener (34) and at least one store for bags (30). A bag (30) provided by the store for bags can be held open, at least in the region of the bag opening, by the bag opener (34). According to the invention, the store for bags (30) is arranged in the immediate vicinity of the slicing blade so that the cut slices (20) can be pushed gradually into the bag (30).
