Abstract (en)
[origin: WO2018115193A2] The present invention concerns an energy distribution system (1) for heating/cooling at least part of a space (6) by means of fluid distribution for energy exchange with the space. The system comprises at least one first distributor (10) and at least one second distributor (20), and tubing (30) connected between the first distributor and the second distributor to create a fluid flow path between the distributors and to exchange energy between the heating/cooling fluid flowing through the tubing laid out in the space and the space itself. The invention also concerns a distributor (10, 20) for use in the system and a method of laying out the tubing (30) of the energy distribution system (1).
