Abstract (en)

[origin: WO2018127330A1] The invention relates to a method for detecting and/or displaying the driver (4) of a vehicle (2) and/or for detecting and/or displaying the limitations of the optical sensing capability of the driver (4) of a vehicle (2) and/or for controlling a vehicle (2) by the driver (4), Said method comprises the following steps: - detecting at least one part of at least one eye and/or at least one part of the face of the driver (4) by means of a monitoring device (3), - evaluating the data detected by the monitoring device (3), - identifying the driver (4) and/or analyzing the optical sensing capability and/or the eyes of the driver (4) and/or controlling devices of the vehicle (2) based on the detected data. The invention enables the limitations and/or modifications of the optical sensing capability of the driver to be monitored, detected and displayed, and the driver to be identified and to simplify the control of the vehicle.
