Abstract (en)  
[origin: WO2018185051A1] Electrical switching device (1), comprising at least one semiconductor switch (2, 3) which is arranged in the current path (4, 5), electrical measuring devices (7, 8, 9, 24), a control device (6) which evaluates the measured values ascertained by the measuring devices (7, 8, 9, 24) and which is designed to actuate the semiconductor switches (2, 3), wherein the control device (6) implements automatically determined actuation operations of the semiconductor switches (2, 3) when specific measured values are detected, wherein the conditions for actuating the semiconductor switches (2, 3) can be transmitted to the control device (6) via a data interface (10) by means of an initiation process.
