Abstract (en)

The present invention relates to a multi-filling container for stick-type contents and a method of filling the same, and more particularly, to a multi-filling container for stick-type contents, in which the multi-filling container is prepared by mounting a multi-filling cover having a three-dimensional shape on an inlet part of a stick-type content case, a movable partition wall is formed at a center of the multi-filling cover, and the movable partition wall is moved inward and outward of the stick-type content case, so that when different types of contents are filled into a lower portion of the stick-type content case, the movable partition wall is moved inward and outward of the stick-type content case to sequentially fill first contents and second contents, and the multi-filling cover is removed from the stick-type content case at a time when the first and second contents are solidified.
