Abstract (en)
Embodiments of present disclosure relates to a shaving assembly and a hair cutting appliance comprising the shaving assembly. The shaving assembly comprises: a supporting arm extending in a first direction; a cutting element comprising at least one moving tooth arranged along the first direction; a guard foil extending in the first direction and surrounding the cutting element, the guard foil comprising: a contact surface and a bent part, wherein an angle between the contact surface and the supporting arm is an acute angle, and at least one guard tooth slot is formed across the contact surface and the supporting arm, wherein the shaving assembly further comprises: a blocking member extending between the moving tooth and the supporting arm in a second direction that is substantially perpendicular to the contact surface, wherein the blocking member is adapted to facilitate hair being released from the guard tooth slot when the guard tooth slot is moved against the hair.
