Abstract (en)

The present invention relates to a warm water supply system, comprising:- a cold water supply; - a hot water appliance having a cold water input connected to the cold water supply, and a hot water output; - a tap connected to the hot water output; and - a flow restrictor arranged in a hot water supply circuit upstream of the tap. More in detail, the invention relates to the feature, that the flow restrictor is arranged upstream of a heater in the hot water appliance.
