Abstract (en)

Technology for a diversity bi-directional repeater is disclosed. The diversity bi-directional repeater can include a first interface port, a second interface port, a 1st direction signal amplification and filtering path communicatively coupled between the first interface port and the second interface port, and a 2nd direction signal amplification and filtering path communicatively coupled between the first interface port and the second interface port. The diversity bi-directional repeater can further include a third interface port, a fourth interface port, a 1st direction signal amplification and filtering path communicatively coupled between the third interface port and the fourth interface port, and a 2nd direction signal amplification and filtering path communicatively coupled between the third interface port and the fourth interface port.
