Abstract (en)
[origin: EP3567753A1] This application provides a paging method, an apparatus, and a communications system, to improve signal received quality of paging information. The method includes: determining, by a terminal device, a target time interval; and listening, by the terminal device, on a channel in the target time interval to obtain paging information, where the target time interval belongs to a target time window, and all time units to which a plurality of beams in the target time window are mapped carry the paging information.
