Abstract (en)
[origin: WO2018130309A1] The invention relates to a device for the diagnosis of a diabetic foot, comprising at least one first unit for generating vibrations. The device is to be compact and easy to handle. According to the invention, the first unit has an electric motor (5), wherein a weight (14) is secured eccentrically on the shaft thereof such that vibrations of a predetermined strength are generated.
