Abstract (en)
[origin: WO2018130979A1] Known fire collars may be made from multiple components that must be assembled to retain an intumescent or may be made from costly materials. The fire collar of the present disclosure comprises a collar body having an outer surface adapted to be cast into a building partition, the collar body defining a bore adapted to receive a pipe or duct therethrough and at least one intumescent material retaining protrusion extending inwardly into the bore for retaining an intumescent material within the bore, and the outer surface comprising at least one retainer adapted to retain the collar body in the partition after casting, wherein the retainer extends inwardly from the outer surface to form the or each inwardly extending intumescent retaining protrusion.
