Abstract (en)

[origin: WO2018130642A1] A system (100) for inerting a fire at an indoor locations (102) comprises a first fire inerting gas system (104) configured to detect and inert a fire at an indoor locations (102). The system (100) further comprises a sensor (302) configured for detecting at least condition at or near the indoor location other than a condition indicative of a fire and a control system 5 (110). The control system (110) is arranged to deliver an amount of inerting gas to the indoor location (102) in case the fire detector (108) detects a condition indicative of a fire and to control the amount of delivered inerting gas on the basis of input from the sensor (302).
