Abstract (en)
[origin: WO2018129588A1] A pedestal assembly receivable on a support surface to support at least one flooring element over the support surface, the assembly comprising first and second members which are telescopically interengaged so as to be able to assume an extended state and a retracted state, whereby a height of the pedestal assembly is adjustable to set a spacing between the flooring element(s) and the support surface, the assembly including a locking mechanism operable in the extended state by way of relative rotation of the members such that the first and second members are locked in the extended state.
