Abstract (en)

[origin: WO2018154250A1] The invention relates to a heat-exchanging device for an air-conditioning system (100), operating with a refrigerant and comprising an evaporator (111) and an internal heat exchanger (107) in the form of a substantially parallelepipedic unit module (500). According to the invention, the device comprises at least one high-pressure fluid inlet (210), one high-pressure fluid outlet (220), one low-pressure fluid inlet (230) and one low-pressure fluid outlet (240), grouped together in a connection area (510) arranged near a corner of said unit module.
