Abstract (en)

[origin: WO2018167446A1] The invention relates to a radiator (1) comprising a body (12) and two containers (10, 11) disposed on two opposing sides of the body (12), said body (12) comprising a plurality of pipes (120) opening at each end into one of the containers (10, 11), said body (12) comprising an end plate (123) disposed at a first end and extending substantially between the containers (10, 11). According to the invention, the end plate (123) has an essentially U-shaped cross-section with a base (1231) extending into two side wings (1232), said base (1231) extending at least partially in contact with the first (120) of the pipes (120), located at the above-mentioned first end of the body (12), each pipe (120) being disposed between two spacers (121) except the first pipe (1201), with no spacer (121) being disposed between the base (1231) of the end plate (123) and the first pipe (1201), said wings (1232) extending from the base (1231) outwards from the body (12).
