Abstract (en)
[origin: EP3569955A1] A cooling warehouse includes a warehouse main body in which an introduction port through which air outside the cooling warehouse is introduced and a discharge port through which air inside the cooling warehouse is discharged are formed, an air-sending device that introduces air outside the cooling warehouse to an inside of the cooling warehouse and discharges air inside the cooling warehouse to an outside of the cooling warehouse, a plurality of leakage detectors that are provided at different heights in the cooling warehouse and each detect refrigerant, and a controller that controls the air-sending device depending on whether or not one of the plurality of leakage detectors detects refrigerant, whether or not another of the plurality of leakage detectors detects refrigerant, and a time during which refrigerant has been detected by each of the plurality of leakage detectors.
