Abstract (en)  
[origin: EP3570370A1] A window glass according to the present invention includes a glass plate, a defogger formed on the glass plate and having a pair of bus bars and a plurality of horizontal heating wires that join the pair of bus bars, and an antenna formed on the glass plate, the antenna including a first power supply part, a first antenna element extending from the first power supply part, a second power supply part, and a second antenna element extending from the second power supply part, the antenna being configured to receive radio waves of a frequency range of a first media, using the first antenna element and the second antenna element, and the first antenna element and the second antenna element both being capacitively coupled to the defogger.
