Abstract (en)

[origin: WO2018133917A1] The invention relates to a food preparation device (1), in particular a baking device, for preparing, in particular shaping and baking, a food, preferably a flat bread, from a substrate portion, in particular a dough portion, accommodated in a capsule (2), comprising a housing, comprising preparation means, in particular comprising at least one baking sheet, and comprising capsule handling means (8) for opening and emptying the capsule (2). The capsule handling means (8) comprises a blade (7) for opening the capsule (2) and a tappet (10) that is adjustable relative to the capsule (2) and to the blade (7) by way of drive means (12), for applying force to the capsule (2), in particular deforming force. The capsule handling means (8) comprise a hold-down plunger (9) that is adjustable relative to the tappet (10), by way of which hold-down plunger force can be applied to the capsule (2) by means of the blade, in particular in the region of a radially projecting peripheral edge of the capsule, for adjusting the capsule (2) against the blade (7), and thus for piercing the capsule (2), in particular a capsule lid film.
