Abstract (en)

[origin: CA3049999A1] The invention relates to a device for treating with high-frequency acoustic waves, comprising at least one chamber and at least one ultrasound transducer. The invention is characterised in that the waves produced by the ultrasound transducer in the chamber have a frequency higher than 100 kHz and preferably higher than 200 kHz. The invention also relates to its use in the treatment of a plant or in the non-therapeutic treatment of an animal in the chamber (2).
