Abstract (en)

[origin: WO2018132851A1] The invention relates to a sit-stand table having four telescoping legs, the upper leg sections (15) of which are rigidly connected to a central cross member (2), wherein movement of an elastic spring (57) is movement-coupled by traction means (21, 22) to relative movement between the upper leg sections (15) and lower leg sections (16). The cross member (2) is rigidly connected to each of the individual upper leg sections (15) by a lateral support (33) and by a diagonal strut (34). The traction means (21, 22) extend through the diagonal strut (34), which is designed as a hollow profile.
