Abstract (en)

[origin: WO2018135954A1] It is described a relief plate or stand with a short and long axis, wherein the plate is curved along the long axis and the arc is turned inwards towards the upper side of the plate, such that the plate may be given a rolling movement along the long axis. The plate includes at least two layers, wherein the first and uppermost layer (1) is formed by a soft or elastic material with hardness 10-30 Shore, and the second layer (2) is formed by a stiff material which defines the shape of the plate and has a hardness of 70-80 Shore.
