Abstract (en)

[origin: WO2018134442A1] The invention proposes a heat exchanger, in particular an evaporator, comprising a heat exchange bundle delimiting a circuit for the circulation of heat-transfer fluid, the heat exchange bundle comprising at least one first tube in which the heat-transfer fluid flows, the heat exchanger further comprising at least one reservoir of phase change material in thermal contact with an outer face of the at least one first tube, the reservoir being delimited by a first reservoir plate and at least one opposing surface. According to the invention, the first reservoir plate has at least one support stud coming into contact with the opposing surface.
