Abstract (en)

[origin: WO2018134529A1] The present invention relates to a method for establishing a connection between an object (12) and a first cellular communication network (14A), the object (12) including a UICC chip card (20) and being connected to a second cellular communication network (14B), the UICC chip card (20) storing a list (32) of cellular communication networks that are forbidden for connection, the method comprising the following steps: a step of transmitting, by the object (12), a request to establish a connection with the second cellular communication network; a step of deleting content from the list (32) of forbidden cellular communication networks; a step (53) of notifying that communication was refused by the second cellular communication network (14B); a step of transmitting, by the object (12), a request to establish a connection with the first cellular communication network (14A); and a step of establishing the connection between the object (12) and the first cellular communication network (14A).
