Abstract (en)
[origin: ES2732299A1] Cooking system. The present invention refers to a cooking system (10a-b), in particular, to an induction cooking system, with at least one support plate (12a-b) and with at least one extractor unit (14a-b), which has at least one fan wheel (16a-b) and partially or completely sucks at least one cooking area (18a-b) through at least one extraction drain (20a-b) of the Support plate (12a-b) by means of the fan wheel (16a-b) the vapors that are produced in at least one operating state. In order to provide a generic cooking system with better efficiency properties, it is proposed that the fan wheel (16a-b) be rotatably housed around at least one axis of rotation (22a-b), which is oriented obliquely with respect to the main extension plane (24a-b) of the support plate (12a-b).
