Abstract (en)
[Problem]The invention provides an air conditioner that can prevent a malfunction due to noise when an optional component is not attached to its air-conditioner main-body.[Means for solving Problem]An air conditioner (1) includes a controller (8) connectable to an option component (10) equipped with a switch (12) used for operation of an air-conditioner main-body (2) and a receiver (11) configured to receive a wireless signal (R) transmitted from a remote control device (6) used to operate the air-conditioner main-body (2), wherein the controller (8) includes: a first terminal (21) to which a signal from the receiver (11) is inputted; a second terminal (22) to which a signal from the switch (12) is inputted; and a processor (13) configured to disable input to the second terminal (22) until the signal from the receiver (11) is inputted to the first terminal (21), and configured to enable input to the second terminal (22) after the signal from the receiver (11) is inputted to the first terminal (21).
