Abstract (en)
The present invention is directed to a conductive chain comprising a plurality of conductive links. Each conductive link (10) is made of an electrically conductive material and comprises a first end portion (11) and a second end portion (12). The first end portion (11) and the second end portion (12) are configured so that the first end portion (11) is able to accommodate and hold a second end portion (12) of another conductive link (10) of the conductive chain.
