Abstract (en)

[origin: WO2018138343A1] The invention relates to a system (100) for the data-dependent automated cannulation of the blood vessels of patients, in particular for hemodialysis, having: at least one cannulation machine (1), which is designed to cannulate the blood vessels of patients in an automated manner, a control system (50, 51), which has at least one data-processing device and which is designed to carry out a control method, which controls the at least one cannulation machine in accordance with program parameters, at least one user interface device (80), by means of which user input is enabled, by means of which a patient logs into the control system (50, 51), wherein, as a consequence of this log-in, a patient identification individually assigned to the logged-in patient is used by the control system, which patient identification is referred to as the logged-in patient identification, and wherein the control system is designed to define the program parameters in accordance with the logged-in patient identification and to control the at least one cannulation machine (1) in accordance with the logged-in patient identification. The invention further relates to a corresponding method.
