Abstract (en)
[origin: WO2018138073A1] The invention relates to a guide device, in particular for sliding doors, having a guide rail (3) made of a shaped steel plate, which has at least one track (4, 5) on which at least one running roller (10) of a running part rolls, wherein the guide rail (3) is formed with two layers in the region of the at least one track (4, 5) and the at least one track (4, 5) is curved concavely or convexly upward or downward, wherein the running roller (10) makes contact with the curved track (4, 5) at two points (15, 16) which are spaced apart from each other and which are arranged on opposite sides of a mid-plane of the track (4, 5).
