Abstract (en)
[origin: WO2018136983A1] The invention relates to an ejection device (1, 101, 201) for a movable furniture part (2, 22), having: at least one ejection element (3, 203) for ejecting the movable furniture part (2, 22) from a closed position into an open position; at least one ejection energy store (4, 204) for applying force to the at least one ejection element (3, 203) when the movable furniture part (2, 22) is ejected from the closed position into the open position; and at least one locking device (5, 205) for locking the at least one ejection element (3, 203) counter to the application of force by the at least one ejection energy store (4, 204). The at least one locking device (5, 205) can be unlocked by pushing the movable furniture part (2, 22) further into a further pushed position behind the closed position in the closing direction (6). There is at least one switching element (7, 207) which is operatively connected to the at least one locking device (5, 205) and has at least one activation position in which the at least one locking device (5, 205) can be unlocked and at least one deactivation position in which the at least one locking device (5, 205) cannot be unlocked. The at least one switching element (7, 207) can be moved into the at least one deactivation position when the movable furniture part (2, 22) is ejected from the closed position into the open position and/or by unlocking of the at least one locking device (5, 205).
