Abstract (en)

[origin: WO2018138448A1] The invention primarily relates to a rotary electric machine (15) including: -a bearing (21); -a stator (18) mounted in the bearing (21), the stator (18) including a winding provided with phase outputs (26); -a heat sink (32) associated with a power electronics module (29) to which the phase outputs (26) are electrically linked; -a shutter (41) mounted between the bearing (21) and the heat sink (32), -characterized in that the shutter (41) includes a body (48) and at least one petal assembly (50) including at least one petal (51) that can fold with respect to the body (48), said at least one petal assembly (50) defining an opening (52) for the passage of a phase output (26).
