Abstract (en)  
The present invention relates to a portable massage and storage device 10, which comprises a rigid outer container 12 fully enclosing a hollow interior and extends along a longitudinal axis L from a first end 14 to a second end 16. The container 12 is formed of a top shell 18 and a mating bottom shell 20, each shell comprising a concave main shell section 28/29 extending from a longitudinal front edge 22/23 to a longitudinal rear edge 24/25, respectively. The two shells 18, 20 are hingedly connected so that they can be pivoted relative to each other from a closed position, in which the front edges 22, 23 and the rear edges 24, 25 abut each other, to an open position, and the container 12 further comprises locking elements 40 that are releasably engageable with one another for securing the container 12 in the closed position.
