Abstract (en)

[origin: EP3575003A1] The invention refers to a flexible nozzle (1) for dispensing a fluid (7) along a surface (8), the nozzle (1) having an elongated body and being formed by first (2) and second parts (3), the first part (2) having a C-shaped cross-sectional configuration comprising two opposite internal sides (5), and the second part (3) having an elongated configuration and being attached to both internal sides (5) leaving a gap (12) in-between for receiving the surface (8) on which the fluid (7) is to be dispensed, wherein both first and second parts (2, 3) are made of flexible materials such that at least a first direction of flexion (D1F) and a first direction of compression (D1C) are respectively defined, the first direction of flexion (D1F) being oblique to a longitudinal axis (L) of the nozzle (1), and the first direction of compression (D1C) being along to a transversal axis (T) of the nozzle (1).
