Abstract (en)  
[origin: EP3575098A1] A rotating seat has a first supporting frame (10) having an assembling member (13), a second supporting frame (20) having a threaded hole (22), a printing assembly (30), an adjusting member (40), and two auxiliary members (50). The second supporting frame (20) is moveably mounted on the first supporting frame (10). The printing assembly (30) is mounted on the second supporting frame (20). The adjusting member (40) is disposed on the assembling member (13) and engages with the threaded hole (22). Each auxiliary member (50) has two ends respectively abutting the first supporting frame (10) and the second supporting frame (20). The height of the printing assembly (30) relative to the first supporting frame (10) is adjusted by the adjusting member (40) to make a type band (31) of the printing assembly (30) flush with a pad (60).
