Abstract (en)

[origin: WO2019228899A1] The invention relates to a braking element (100) for braking a knitting element movement in a guide channel, the braking element (100) having at least one connecting portion (102, 104) and at least one braking portion, wherein the at least one connecting portion (102, 104) is displaceable between an assembly/disassembly position and a holding position, the braking element (100) has at least one spring portion (108), and the at least one spring portion (108) subjects the at least one connecting portion (102, 104) to a spring force in the direction of the holding position, and relates to a knitting element, a knitting element carrier, a knitting device, and a modular system for a knitting device having at least one such braking element (100).
