Abstract (en)

[origin: WO2018141630A1] The invention relates to a method and to a device for drying an explosive, wherein the explosive contains moisture and microwave radiation causes the explosive to expel the moisture contained in the explosive. According to the invention, there is a drying chamber having magnetrons. Said magnetrons can then exert the required microwave radiation on the explosive to be dried and thereby heat the explosive. During heating, the moisture in the explosive is then expelled.
