Abstract (en)

[origin: CN108374275A] The invention relates to an iron comprising a housing (1), a heating body (2) in which an electrical element (20) is embedded and a heat shield (3) inserted between the heating body (2) and the housing (1), the heat shield (3) being fastened to the heating body (2) by attachment means (4, 5), said attachment means of the heat shield (3) comprising an attachment flange (5) to which the heat shield(3) is attached, said attachment flange (5) engaging with the heating body (2) and being made of a thermoplastic material that has undergone an ionizing treatment to improve the temperature resistancethereof.
